

The ONLY one-part tie-plugging compound available in the market...
...as opposed to other two-part components. Blu-Plug is ready to apply just by adding a water activant.

Safe, Simple, Easy to Apply

Blu-Plug is an easy to use, one part polyurethane that reacts with a water/activant mixture which is formulated to work more safely than the competitors.

Performance

Independent laboratory results have proven the effectiveness of Blu-Plug in wet or dry conditions, with an insertion & extraction force of up to 8,000 lbs and as little as 0.015 inches of spike deflection after 1 million cycles of lateral load tests.

Effective in Rain, Sleet, Snow

Blu-Plug will only react with the specified amount of water. Water filled holes due to precipitation will not effect it's efficiency, set up time or holding capacity. Only one hose is heated to maintain consistent performance. Set up time is as little as five minutes in all weather conditions.

Easy Storage

Blu-Plug material has a longer shelf life (up to 6 months) than others in the market; frequent cleaning of the lines is not necessary. Shut down is as easy as:

1. Remove the disposable "Mix-Stik".
2. Give one or two pumps of grease to seal the gun nozzle.
3. Cover nozzle with the Nite-Cap and walk away.

For start up simply remove the Nite-Cap and insert a new Mix-Stik.

Packaging

Standard packaging size is 5-gallon pails weighing 50 lbs, which is enough material to fill up to 750 spike holes. Blu-Plug is also available in small hand held cartridges for small maintenance projects or up to 35 Gal drums for production applications.

One Call To Do All

Unlike the competition, Racine Railroad Products manufactures the material ***and*** the application mechanisms. No need to contact multiple suppliers. We can solve your entire tie plugging inquiries with one easy call.
