

RRP Machine Onsite Training Services

Racine Railroad Products offers Diagnostic and Maintenance Training at your site or our Mt. Pleasant, Wisconsin, Training Center. Training covers technical and diagnostic operations on specified RRP machines and is geared towards 2017 and newer units:

- AM-3 Anchor Applicator (AM-3)
- Advanced Anchormatic (AAM)
- Advanced Tie Plate Inserter (ATPI)
- Dual Anchor Adjuster (DAA)
- Dual Anchor Spreader (DAS)
- Dual Clip Applicator (DCA)
- Dual Anchor Spreader Plate (DASP)
- Safelok Clip Applicator (SAR)

Classroom and Hands-On Training

Training covers RRP software, hardware, and operation logic to identify issues and troubleshoot. The main emphasis is on understanding and using the built in diagnostics found in RRP control systems.

Topics covered include:

- CAN bus Overview
- CMA Valves
- Engine Diagnostics
- Hydraulics Diagnostics
- IQAN System
- Machine Operations & Auto Cycle
- Modules
- Smart Cylinders

Training Objective & Schedule

Proper care and maintenance of Racine machines by learning theory, functions, diagnostics, and the repair of machine systems.

Training is normally scheduled Tuesdays through Thursdays for both classroom and hands-on training.

**Monday and Friday are designated as travel days.*

Class Size

- Minimum: 4 persons*
- Maximum: 10 persons

** For classes under 4 persons, there may be an additional travel charge for the instructors.*

Cost

Contact RRP to request a quote for mechanic training. Cost includes instructors, classroom materials, and hands-on activities.

Transportation and hotel accommodations for the students is not included.
